

FLEXO PRESSES

Machine Audit/Inspection

Pre-Print Technology Ltd

Intent of Audit

- Thoroughly inspect press mechanical, hydraulic, pneumatic and electrical systems in both static and dynamic state to assess areas for damage, wear, or necessary upgrades. Items will be rated on a level of urgency, benefits, risks and costs

Audit Process

- All components/systems will be examined while the equipment is in a static condition with all potential energy sources (electrical, hydraulic, pneumatic) in a zero state to inspect for wear and/or damage.
- All components/systems will be examined while the equipment is in a static condition with all potential energy sources (electrical, hydraulic, pneumatic) energised to inspect for wear or damage.
- All components/systems will be observed to evaluate various aspects of equipment functionality during running conditions.
- An audit report will be issued following the on-site machine inspection and review
- Improved press performance/reliability by discovering overlooked issues.
- Audit report will include photographs of issues or worn components.
